Firmware version 1.4.0 WEP-3ax, WEP-3ax-Z

Solution for enterprises

WEP-3ax-Z is a new Wi-Fi 6 generation access point that will provide maximum bandwidth and stable wireless connection for all connected devices.
802.11ax access points support a broader set of applications that require maximum performance in demanding enterprise environments with low power consumption and low latency.

Wireless connection

Due to support for IEEE 802.11ax standard WEP-3ax, WEP-3ax-Z access points provide 574 Mbps (2.4 GHz) + 1201 Mbps (5-6 GHz) data rates
The use of MIMO technology and embedded omnidirectional antennas makes WEP-3ax and WEP-3ax-Z a universal solution for corporate networks construction.

Performance

The high-performance Broadcom processors are used in the devices in order to provide reliability and high data processing rates.

Power supply

The PoE+ technology makes installation of the equipment possible virtually everywhere, regardless of the power supply location. The use of PoE+ technology reduces total cost by discarding power cables and makes installation easier and faster.

«Smart Home» controller

The device contains integrated controller for the «Smart Home» system. The controller provides interaction with sensors and detectors through the wireless Z-Wave channel.
