

WOP-12ac

All-weather access point

WOP-12ac is designed to provide users with access to a high-speed and safe network in different climatic conditions: in high temperature range and high humidity (parks, factories, stadiums, etc.). WOP-12ac is an optimal platform for network organization in suburban settlements and remote locations.

Wireless connection

WOP-12ac provides 1300 Mbps (5GHz) + 450 Mbps (2.4 GHz) data rate as it supports IEEE 802.11n/ac standards. Furthermore, the WOP-12ac supports MIMO technology and has omnidirectional antennas that makes it a universal solution for public network organization.

Security

WOP-12ac provides secure connection due to the support of up-to-date authentication technologies. Particularly, it uses a dynamic key that is unique for each mobile device that interacts with WOP-12ac.

Performance

To ensure a stable and uninterrupted operation, the device is equipped with high-performance chipsets providing high data processing rate.

Power supply

The support for PoE+ technology allows you to install the device virtually anywhere, regardless the power supply location.
