RR-10

RR-10 is a universal wireless signal repeater designed to extend wireless networks coverage and amplify Wi-Fi signal strength. The solution helps to eliminate blind spots and optimize the operation of your Wi-Fi network.

Wireless connection
RR-10 repeater provides high data rate due to the support for IEEE 802.11n/ac. The use of MIMO technology and internal antennas makes the RR-10 a universal solution for extending a home network and providing high-quality 4K multimedia transmission.

Advantages of EasyMesh technology

- Network intelligence: a self-organizing and self-optimizing network collects information and responds to network condi-tions for maximum performance
- Efficient load balancing: allows for switching to a better connection and avoid interference
- Scalability: allows adding multi-vendor Wi-Fi EasyMesh access points
